Frameworks Lab

Amber Vasquez, kav835

- What visualization framework are you most interested in learning?
  - I am interested in front-end engineering in D3 or Tableau
- What visualization framework do you think would be the most practical for someone in your major?
  - I am a math major, but I entered it for the reason of gaining data science/analytics skills to get into tech and data fields. I am most interested in a job where user experience design and data are used. I am not sure which is the best, I think it would depend on which industry I pursue and what is in use in each company. It seems to be hard to specialize at this stage, but I see a lot of SQL, Tableau skill requests in job applications.
- What (if any) visualization frameworks (outside of python / matplotlib / altair) have you had experience with?
  - I have used general statistical modeling platforms like R to create visualizations, and used SQL, Mongo DB, and others to engineer data and create a visual. I have also used Excel to create data visualizations in Statistics and Data sciences for health.
